

1 SYSTEM AND METHOD FOR WIRELESS LOCATION
 COVERAGE AND PREDICTION

5 ABSTRACT

 The software of the present invention predicts the
performance of a wireless location system, including its
accuracy, availability, and coverage. The tool can determine if
the deployed location sensors meet, exceed, or fall short of
10 providing the expected coverage and performance. The tool allows
the location system designer to eliminate redundancies if not all
sensors are needed and propose additional sites where coverage
holes are present. The software tool includes a graphical user
interface for ease of use.
